## *Executive Summary*

The Metadata Ingestion Plan for Europeana Cloud supports the process of managing the workflows for aggregating and ingesting metadata through The European Library into Europeana.

This plan presents the ingestion process in general and a realistic timeframe for ingestion of all metadata delivered by the content providers of the project. The European Library will serve as the main aggregator in this project and will deliver aggregated metadata datasets to Europeana for ingestion. This plan builds on successful and efficient workflows, aggregation and ingestion processes, established during the Europeana Libraries project (which ended in December 2012).

2.4 million new records will be made available through the portals of The European Library and Europeana by the end of the project in 2015. The basis for this plan was a questionnaire filled out by all partners (see Appendix A). The answers, especially on the readiness of the data, guided the timetabling of the datasets. The ingestion plan is broken down into manageable portions of quarterly planned datasets for ingestion. This plan will be reviewed and updated every six months, rescheduling datasets that were not delivered to timetable. Quieter periods (such as Quarter 3 in 2014 and Quarter 4 in 2015) ensure that any delayed datasets can easily be accommodated and do not negatively impact the ingestion timetable for the other datasets.

This ingestion plan will start with an outline on the scope of the ingestion task. It will then outline the process how The European Library has gathered the information guiding this ingestion plan from the partners. Then it will highlight the aggregation and ingestion process in The European Library as well as how this can be monitored. Risk assessment and mitigation will be introduced in this section as well. In the following section the quarterly plan for the ingestion is introduced. The last section will wrap up this plan and highlight next steps in the ingestion plan. The Metadata Ingestion Plan is an important tool for performance evaluation and risk management.

## 1. Introduction

The Metadata Ingestion Plan for Europeana Cloud establishes a realistic schedule for the aggregation and ingestion of the metadata from partners. The European Library will utilize their established processes, for harvesting the data, ingestion into the live portal of The European Library, acceptance of data by partners and, finally, data delivery to Europeana. The schedule of the ingestion process has been created using the results of a questionnaire circulated to those project partners committed to contributing metadata. The plan will be reviewed, and where necessary updated every six months, and is flexible enough to adapt to unforeseeable problems with contributing partners, The European Library or Europeana. The Metadata Ingestion Plan has scheduled more intense ingestion activities in the first half of the project, as in the second year of the project the focus will shift towards the ingestion of content. By the end of the project 2.4+ million new metadata records and 5 million items of high quality digital content will be available for reuse by researchers.

## 2. Development of the Metadata Ingestion Plan

The Metadata Ingestion Plan was created in cooperation with the Europeana Cloud content partners. The information was collected from the partners via a questionnaire from the participating institutions. The questionnaire was based on general questions that The European Library asks all new providers, but tailored to the requirements of the project. It was sent out in March 2013, with a deadline of early May 2013.

The questionnaire asked about general information of the partner institutions, specifics about their datasets and, especially interesting for this plan, the time of availability of their data. The questions of the questionnaire and a screenshot of the Google form that was utilized for this purpose can be found in Appendix A.

The results of the questionnaire were validated and then transferred to the Customer Relationship Management tool (SugarCRM) in use at The European Library. Using SugarCRM, a first timeline of the ingestion process was established. SugarCRM allows us to easily keep track of the ingestion process as automatically generated reports immediately show the status of ingested and planned datasets per quarter. A screenshot of these reports is provided in Appendix B.

The initial timeline was refined based on expertise of the operations team in The European Library, with the aim to balance the workload and especially datasets that are anticipated to be more difficult to aggregate and ingest with those that are expected to be easier to process. A dataset is easier to process when it can be ingested directly in the system in the original metadata format. Metadata standards with direct support are: MARC21, MarcXchange, Marcxml, Unimarc, ESE, EDM, OAI\_DC. A dataset is more difficult to process when the original metadata format (e.g. METS, MODS, TEI) needs to be mapped to one of the formats above or if it needs major data cleaning.

In June and July 2013, the first ingestion clinics will be held to show all participating institutions the aggregation and ingestion workflow performed by The European Library, using the specific example of datasets contributed for this project. A follow-up will be organised in conjunction with the Annual Meeting organised by The European Library (Amsterdam, 17-18 September 2013), and further Ingestion Clinics will be held at regular intervals during the project to allow partners to address their specific needs and problems for the ingestion process. Each of these clinics should give us feedback on the ingestion process and might lead to updates of the Ingestion Plan.

### 3. Aggregation and Ingestion Process

The aggregation and further ingestion into The European Library starts in quarter 2 of 2013 with two initial collections. These two initial collections will also serve as examples of the ingestion process for the first ingestion clinic in June/July 2013, consisting of three Google Hang-out sessions for 8-9 project partners each, on 19 June, 21 June, and 3 July.

This document representing the Metadata Ingestion plan will be updated regularly. Informal updates can occur after each quarter and official updates will be done every 6 months during the runtime of the project. The overview of the ingestion timetable can be seen in Table 1. A split into quarters achieves a good trade-off between flexibility and efficiency of the plan.

*Table 1 Overview ingestion process*

Quarter	Action	Number of records
Q1 2013	Planning	
Q2 2013	2 collections	3.414
Q3 2013	13 collections	903.160
Q4 2013	18 collections	1.016.428
Q1 2014	8 collections	44.650
Q2 2014	9 collections	36.864
Q3 2014	1 collection	3.543
Q4 2014	4 collections	20.530
Q1 2015	3 collections	26.000
Q2 2015	0 collections	0
Q3 2015	2 collections	3.200
Q4 2015	last deliveries to Europeana	
	<b>Total</b>	<b>2.057.789</b>

As can be seen from the table, the plan aims to process most of the metadata in the first half of the project, to allow staff to be reallocated to the content ingestion planned for the third year of the project. Most of the ingestion will be take place in quarters 3 and 4 of 2013. Quarters 3 of 2014 and 2 and 4 of 2015 act as a buffer, during which time delayed content may be processed without jeopardising the overall timetable

Note that this plan is missing two providers: Cinecitta', KB Denmark, who did not fill in the questionnaire. KB Denmark is itself an aggregator for Europeana and has indicated that it wishes to make alternative arrangements for contributing its (c. 400k items) to Europeana. The dataset pledged by Cinecitta' is relatively small (c. 100 newsreels) and can be accommodated in the general schedule without upsetting the general timetable. This means that the target of ingesting 2.4 million metadata records will comfortably be met, well before the end of the project (January 2016).

The general aggregation and indexing process of The European Library consists of the following steps:

1. Content ingestion questionnaire
2. Scheduling of ingestion
3. Datasets ready for harvesting
4. Create case in CRM: case # sent to provider

5. Harvesting metadata (Tool Repox see Appendix C)
6. Enhance metadata (VIAF, Geonames, MACS, etc.) (Tool UIM see Appendix C)
7. Indexing in acceptance portal (<http://www.tel.ulcc.ac.uk/acceptance/> see Appendix C)
8. E-mail to provider to accept dataset
9. Live index = live portal (<http://www.theeuropeanlibrary.org/>)
10. Delivery to Europeana
11. Enhancing and publishing in Europeana

Note that actions 1-4 have already been completed for the data from Europeana Cloud in the preparation of this ingestion plan.

The Metadata Ingestion Plan has two major activities: aggregation and ingestion into The European Library portal and delivery to Europeana (after partners have accepted dataset presentation in The European Library). Since the period between delivery to and ingestion into Europeana may be around one month, the ingested datasets may be accessible in the Europeana portal only in the quarter following the quarter indicated in Table 1 above.

## 4. Risk Analysis

Risk assessment and mitigation is of the highest importance.

The risks that have been identified so far are:

- Aggregation of metadata is delayed due to problems on the provider site (hardware failures, delay in availability of data, metadata format problems, unforeseen legal problems etc.)
  - Impact: Dataset cannot be aggregated and ingested by The European Library and will therefore not appear in The European Library or Europeana
  - Score: Low to medium probability, very severe if it is not just a temporary delay
  - Mitigation: If delays are only temporarily, reschedule dataset at a later stage in the project. We should keep good contacts with the partners to foresee these problems early. Problems with metadata should be recognized early by evaluating provided samples in time.
- The European Library is not able to aggregate and ingest data or deliver data to Europeana.
  - Impact: This would yield to a very high impact if this problem is severe and cannot be solved in a short period of time as The European Library is the single point to get the data from the provider and deliver them to Europeana.
  - Score: Due to stable and robust ingestion processes and deliveries to Europeana the probability should be very low, but if a big hardware failure or problems with data amounts arise, it can have a very severe effect on the project.
  - Mitigation: This should be communicated immediately to the project board and worst-case scenario might include switching aggregator. In case of a temporary outage, the plan should be adapted and changes must be communicated to the project board.
- Europeana cannot process data in time (hardware failures, system upgrades, etc.)
  - Impact: The content is not available in Europeana.
  - Score: Especially in the beginning of the project, this might be a higher risk than usually for the reason that Europeana is going through a major system change including switching to Europeana Data Model (EDM) and using Unified Ingestion Manager (UIM) for ingestion. The portal as well went through a major system upgrade and might suffer from some initial bugs. This can be severe if the problems are still there after the first year.
  - Mitigation: The European Library should keep a close cooperation with the Europeana Ingestion Team and timely address problems with deliveries in EDM.

To ensure that we do not experience delays on the ingestion timetable the Ingestion Team of the European Library maintains regular communications with all data providers to ensure a timely delivery of data.

To further mitigate risks in delays in the ingestion process due to unknown metadata standards etc. we ask all partners to provide us a data sample of their data which is especially important for data formats that are not directly supported by TEL (DC and MARC variants preferred). The Ingestion Team analyses sample sets of data to ensure that major

problems with datasets are recognised early, and a dataset is rescheduled if more pre-processing (e.g. format transformations) is required.

Slippage on the overall timetable is minimised by provision of buffers. The regular review of the Ingestion Plan, plus its division in stages of three months each allow for a close monitoring of progress, and timely counter measures, when required. Regular meetings between the ingestion team and the WP leader should guarantee a good supervision of the ingestion process.

All risks identified above are closely monitored by The European Library. During the runtime of the project problems that arise with the ingestion process will be reported to the work package leader. If problems are bigger than expected, these are escalated to Project Manager, and, if necessary, to the Project Board. If the risk probability for any of the risks above significantly increases or a major risk like unavailability of The European Library infrastructure occurs, this is reported immediately to the Project Manager, through the WP leader.

## 5. Introducing the Ingestion Plan

Ingestion is planned on a quarterly basis starting with April 2013 (Q2 2013) and ending on December 2015 (Q4 2015). The ingestion of metadata has the highest concentration in 2013 as data is already available and project ingestion at this stage is compatible with the general workload for The European Library. Note that Quarters 3 of 2014 and 2 and 4 of 2015 act as a buffer, during which time delayed content may be processed without jeopardising the overall timetable.

Table 2 Ingestion plan for Q2 2013

Provider	Country	Collections	Records	Digital Objects	DoW
OAPEN Foundation	Netherlands	OAPEN	2.000	0	2.000 (Approx. 1000 peer reviewed monographs, from more than 30 European academic publishers)
OAPEN Foundation	Netherlands	DOAB	1.414	0

## 6. Conclusion

The Metadata Ingestion Plan is a key tool for monitoring the aggregation and ingestion of new metadata records in Europeana Cloud. The process describes how the data from the content providers in the project is aggregated and ingested into The European Library and further delivered to Europeana.

The Metadata Ingestion Plan was created in cooperation with the content providers, The European Library and Europeana. It outlines how the information was gathered via a questionnaire and subsequently transformed into this plan. It highlights the procedure The European Library will apply to bring the data from providers to the Europeana portal. The plan stretches the ingestion process starting with Q2 2013 and ending in Q4 2015. At the end of the project 2.4 millions records will be available in the Europeana portal.

After creating this plan The European Library will start aggregating and ingesting the first datasets which will serve as examples for the first Ingestion Clinic to showcase the process and get feedback from the partners on the ingestion process.

---

## 7. Appendix A: Questionnaire

### Entry Page

#### **1. Personal Information (about the person filling in the web-form):**

- Mr/Mrs/Miss;
- First name;
- Family name;
- Title;
- Email address;
- Skype address.

### Second Page

#### **2. Information about Organization:**

- Organization name;
- Country;
- Website;
- Type of institution.

### Third Page

#### **3. Harvesting Details:**

- Which protocol will be used to transfer data to The European Library? [OAI-PMH, File, Z39.50, other];
- Harvesting time and dates preferences; If yes, which would be the preferred time? [out-of-office hours, weekends, other; If yes, which ones would be the preferred dates? If yes, for which collection(s)?
- How often your collection(s) will need to be updated? [weekly, monthly, quarterly, etc.]; If yes, for which collection(s)?

### Fourth Page

#### **4. Information about Dataset(s)/Collection(s):**

- Number of dataset(s)/collection(s) to be ingested;
- Collection(s) name(s);
- Number of records to be expected per collection(s);
- Number of digital objects to be expected per collection(s);

- Contact person(s) per collection(s): first name, family name, email, phone, Skype, area of expertise [Editorial: for collection description, Technical: for collection ingestion]

#### **5. Information about Metadata:**

- Metadata standard(s) available to describe objects (Marc formats are strongly recommended) [Marc21, Unimarc, ESE, EDM, METS, MODS, OAI\_DC, TEI, other];
- How many formats are available per dataset?
- Are the metadata ready? If yes, for which collection(s)? If not, when will they be ready?
- Type of digital objects per collection(s) [TEXT, IMAGE, AUDIO, VIDEO].

#### **6. Information about Content:**

- Will content be delivered in addition to metadata? If yes, for which collection(s)? If yes, in which format(s)?
- Has the content been digitized? If yes, for which collection(s)? If not, when will it be?

#### **7. Information about Authority:**

- Will authority files be delivered? If yes, for which collection(s)?
- Are controlled vocabularies utilized? If yes, which kind? [Classification, Thesauri, Subject Headings, other]; If yes, for which collection(s)?
- Will full-text be delivered? If yes for which collection(s)?

#### **Fifth/Last Page of the online questionnaire:**

If you made a mistake we will be happy to help!

## Europeana Cloud Project - Content Ingestion Questionnaire

In order to assess the content that you would like us to harvest please fill out this questionnaire. Your library can provide data in any format from Marc21 to proprietary xml. Please provide information for each collection. If you have any questions please do not hesitate to contact our Collections Ingestion Team [collections@theuropeanlibrary.org](mailto:collections@theuropeanlibrary.org)

## 8. Appendix B: SugarCRM

### User interface

SugarCRM is a Customer Relationship Management tool in which all information about partners, datasets, right statements, dates of harvesting and ingestion, delivery to Europeana, etc. is stored. It automatically creates reports and synchronizes data with other systems in use at The European Library, such as the Portal, UIM and Repox.

Acceptance portal (<http://www.tel.ulcc.ac.uk/acceptance/>)

The screenshot shows the search results page for 'a1139' on The European Library. The page features a dark header with navigation links (About, Membership, For Current Partners, Log in, English (en)) and a search bar. Below the header, there are tabs for 'Everything', 'Full text', 'Remote Search', and 'Authority'. The search results are displayed in a list format, with each entry including a thumbnail, title, author, year, and 'Access Online' link. A 'Thumbnail Gallery' section shows five 'open' logos. On the right side, there is a 'REFINE' section with filters for 'Collection: OAPEN', 'Accessibility', 'Discipline', 'Language', 'Contributor', and 'Collection'. Below this is a 'YEAR OF PUBLICATION' bar chart showing a significant increase in publications around 2000. At the bottom right, there is a map of Europe with a zoom function.
