  3.3 Branded Social Media Presence ........................................... 25
  3.4 Use as an ‘affiliate’ logo on software and other 3rd party product branding ............. 27
1 Introduction

The creation took place between April and the end of June in order to develop a strong identity for Europeana Inside as contributing project to Europeana. The aim is to develop a brand identity suitable for a wide range of applications including:

- Branded marketing and dissemination materials (print and electronic);
- Branded email newsletter;
- Website and other electronic branding;
- Branded social media presence;
- Use as an ‘affiliate’ logo on software and other 3rd party product branding.

This deliverable (D1.2) is about the branding materials and brand guideline of Europeana Inside. The branding material is focused on both electronic and print material. With print material a broader audience and other groups are reached in a more haptic way.

The conceptual design is based on the ‘software and culture’ theme. The colour of the branding material is accommodated to the corporate colour of the Europeana Inside logo in RGB-code 133, 04, 210.

In general the branding material of Europeana Inside will be distributed to every member of the project in digital form (format <.psd>) to disseminate the branding material in their respective countries. Textual content can easily be translated.

The Stiftung Preussischer Kulturbesitz (SPK) is always available for improvements and suggestions of the other consortium members.

The branding material is distributed during the developing process to interest cultural institutions and the clients of the participating software providers for the digitisation project. It should also raise awareness about the Europeana Inside product: the Europeana Connection Kit (ECK). After the publication of the full version of the ECK the branding material has to be updated and distributed.

The intended audience is:

- participating cultural institutions
- participating software providers
- clients of the participating software providers
- potential cultural institutions not yet participating
- potential software providers not yet participating
2 Brand Guideline

- Logo: Europeana Inside logo and the cip logo on the branding material;

- Brand Colour;
  - RGB-code 133, 04, 210 (based on RGB-code of Europeana Inside logo);
  - Background colour: white (RGB 255, 255, 255);

- Font: Palatino Linotype (electronic and print material);
- Font in PowerPoint Presentations: Arial or Verdana (ensure good readability and avoid technical problems with inadequate system software);
- Font size in PowerPoint Presentations: not less than 16 pt;
- Font size in longer text documents: not less than 11 pt and not over 14 pt (to ensure good readability);
- Writing: Europeana Inside.

Colour and font are the most important and instantly recognizable elements in corporate branding and should be respected during the dissemination of Europeana Inside.

3 Branding Material

Central to the Branding Material is the visual effect of matrix, code and programming style to attract the attention of persons from this sector. Europeana Inside has at its disposal a range of different branding materials. The listings below give information about four parameters for each material:

- **Purpose** – Why it is being used;
- **Nature** – What it is;
- **Intended audience** – Who it is aimed at;
- **Dissemination level** – What type of dissemination it is being used for.
3.1 Print Material

Considering the intended audience, hands-on and approved print branding material is firmly in focus of the dissemination. Both catchy and functional the print material can be used in the office and as giveaways to colleagues, clients or others to promote Europeana Inside.

Inside of Cover

Europeana Inside

The main objectives are...

- to open up a significant critical-mass of new digital cultural content from European cultural institutions for delivery through Europeana,
- to simplify significantly the process of contributing content to Europeana for cultural institutions and aggregators of all scales and types throughout Europe,
- to help cultural institutions and aggregators overcome the organisational, technical, legal and financial barriers to participation by part-automating the workflow by which content is made available to Europeana, and creating tools for the management of permissions and licensing,
- to build on the framework of standards and protocols established under previous europeana projects by ensuring that current and future generations of collections and digital asset management software are ‘Europeana-ready’,
- to support metadata enrichment in content provider systems (and thereby deliver value to participating organisations and their users) by creating a channel for enhanced content to flow back from Europeana as the central domain aggregator and point of access to local systems.

**Europeana Inside**

The primary objectives of the Europeana project are to:

- build a collaborative network of cultural heritage institutions
- support cultural heritage digitalisation
- support the creation of a training infrastructure
- support and promote the use of the European Union policies for the cultural heritage sector

**cultural heritage**

**digitalisation**

**network**

**collaboration**
Europeana Inside is a best practice network

...which brings together world-leading cultural heritage institutions with global collections management system providers to provide a combination of sector and technical expertise.

...within which technical partners develop open-source tools which reduce or remove the legal, technical, financial and operational barriers to participation in aggregated services by cultural institutions.

The main objectives are:

...to open up a significant critical-mass of new digital cultural content from European cultural institutions for delivery through Europeana,

...to simplify significantly the process of contributing content to Europeana for cultural institutions and aggregators of all scales and types throughout Europe,

...to help cultural institutions and aggregators overcome the organisational, technical, legal and financial barriers to participation by part-automating the workflow by which content is made available to Europeana, and creating tools for the management of permissions and licensing,

...to build on the framework of standards and protocols established under previous Europeana projects by ensuring that current and future generations of collections and digital asset management software are ‘Europeana-ready’.

Europeana Inside

Europeana Inside Best Practice Network started in April 2012 and lasts for 30 months. It is co-funded by the European Union under CIP-ICT-PSP to support the Digital Agenda for Europe by achieving a lasting transformation in the quantity, scope and usability of the content available to Europeana from European cultural institutions.

The main objectives are...

- to open up a significant critical-mass of new digital cultural content from European cultural institutions for delivery through Europeana,
- to simplify significantly the process of contributing content to Europeana for cultural institutions and aggregators of all scales and types throughout Europe,
- to help cultural institutions and aggregators overcome the organisational, technical, legal and financial barriers to participation by part-automating the workflow by which content is made available to Europeana, and creating tools for the management of permissions and licensing,
- to build on the framework of standards and protocols established under previous Europeana projects by ensuring that current and future generations of Collections and Digital Asset Management Software are ‘Europeana-ready’,
- to support metadata enrichment in Content Provider systems (and thereby deliver value to participating organisations and their users) by creating a channel for enhanced content to flow back from Europeana as the central domain aggregator and point of access to local systems.

3.4 Use as an ‘affiliate’ logo on software and other 3rd party product branding

The affiliates of Europeana Inside (i.e. software developers and cultural institutions connected to the Europeana Inside project) will get an ‘affiliate’ logo to attach it onto the developed and used software in form of a sticker (e.g. the stickers on computer like ‘intel inside’ or ‘windows 7’). In this case the regular logo of Europeana Inside (the ‘e’ with bulbs) will be used.

‘affiliate logo’-sticker

It is still to discuss whether a separate logo exclusively for the product of the Europeana Inside project ECK should be developed. A common logo for the software package (ECK) attached to all parts of the ECK software package to be developed till the end could be branded with the Europeana Inside bulb (marked in the first line with ‘europeana’ and in the second line with ‘Europeana Connection Kit’) with the objective of the ECK to be perceived as the product of Europeana Inside project.
