Management Summary

The Harvesting and Transformation component is a software that realizes the harvesting of ABCD metadata and the transforming of this metadata into the ESE format of the European Digital Library, Europeana¹. This software is accompanied by the following documentation:

Part 1: Introduction (with basic mapping information)

Part 2: Stylesheet

Part 3: The Pentaho Transformation Procedure

The present document "Part 1: Introduction" introduces to the Deliverable D02/D2.2.2 of Task 2.2 "The Harvesting and Transformation component" and shows the mapping that builds the baseline for the transformation process from ABCD metadata to Europeana conform ESE metadata. "Part 2: Stylesheet" describes the stylesheet that is used within the Pentaho procedure. In "Part 3: The Pentaho Transformation Procedure" the transformation procedure from the native ABCD record to the standard Europeana record is described.

¹ <http://www.europeana.eu>

1. Introduction

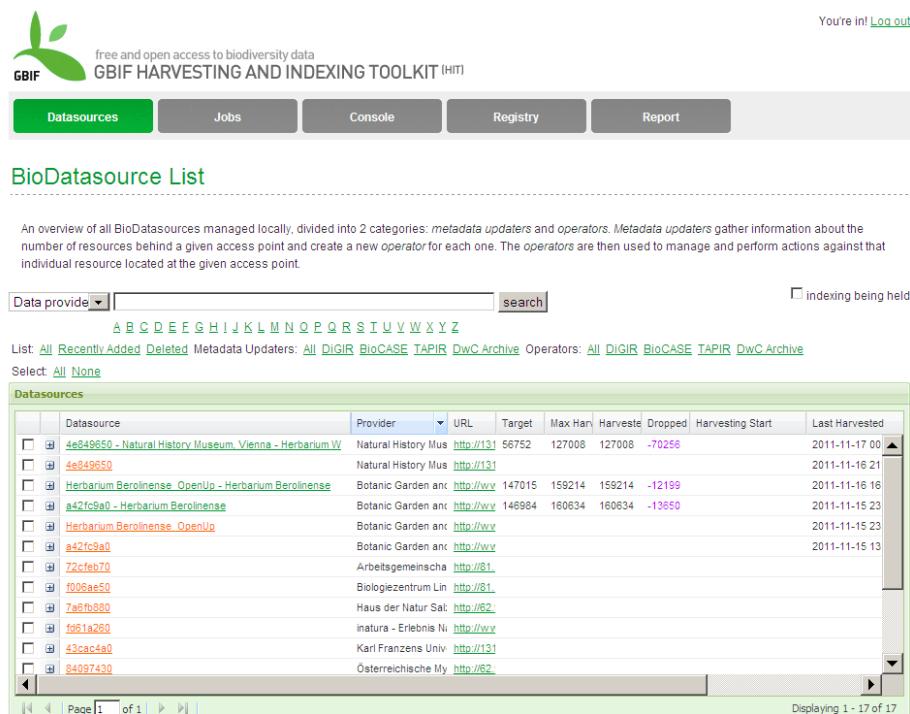

1.1. The Harvesting and Transformation component in general

The OpenUp! harvesting and transformation component will be set up to harvest data on request from the data repositories of the content providers and ingest the data to the OpenUp! OAI provider. D2.2.2 the OpenUp! harvesting and transformation component is delivered in a virtual machine to the WP2 lead, the Natural History Museum in London. It will be set productive at the NHM in London. D2.2.2 contains all components of the harvesting platform and the transformation component form ABCD format to ESE.

1.2. The Hit Harvester

For harvesting the OpenUp! Content providers' data the GBIF HIT (Harvesting Index Toolkit) Harvester has been used. "The Harvesting Index Toolkit is an open-source, Java-based web application that simplifies the process of harvesting biodiversity data from a distributed network of data publishers."²

The harvested native data (approx. 200.000 records) which was used for testing and developing the transformation component was put onto the virtual machine for NHM London, too. The Pentaho transformation procedures is taking the native data from there.

The screenshot shows the GBIF HARVESTING AND INDEXING TOOLKIT (HIT) interface. At the top, there is a navigation bar with tabs: Datasources (highlighted in green), Jobs, Console, Registry, and Report. On the right side of the header, it says "You're in! [Log out](#)". Below the header, there is a search bar with dropdown menus for "Data provider" and "Indexing being held". A "search" button is located next to the search bar. Below the search bar, there are links for "List: All Recently Added Deleted", "Metadata Updaters: All DIGIR BioCASE TAPIR DwC Archive", and "Operators: All DIGIR BioCASE TAPIR DwC Archive". There is also a "Select: All None" button. The main content area is titled "BioDatasource List" and displays a table of harvested data sources. The table columns include: Data source, Provider, URL, Target, Max Har., Harvested, Dropped, Harvesting Start, and Last Harvested. The table lists 17 entries, each with a checkbox and a small icon. The last entry in the table is highlighted in red. At the bottom of the table, there is a page navigation bar with links for "Page 1 of 1" and "Displaying 1 - 17 of 17".

Figure 1 Local GBIF harvester at the D2.2.2 component

² <http://www.gbif.org/informatics/infrastructure/indexing/>

Figure 1 shows a screenshot of the local HIT harvester. Only metadata that is connected to digital objects (images etc.) has been included in the harvest, plain metadata has been dropped.

1.3. Data Integration via Pentaho

The OpenUp! Project is a best practice project therefore it was decided to use the state-of-the-art open source Pentaho³ Data Integration system to support the data transformation process. This process is described in detail in Part 3 of the D02 documentation "The Pentaho Transformation Procedure".

"Pentaho Data Integration, codenamed Kettle, consists of a core data integration (ETL) engine, and GUI applications that allow the user to define data integration jobs and transformations. It supports deployment on single node computers as well as on a cloud, or cluster."⁴

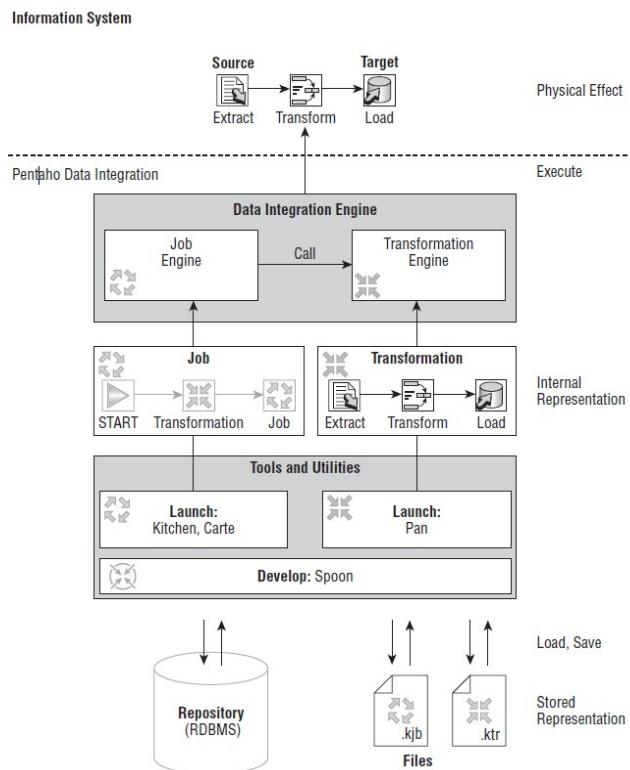

Figure 9-1: Pentaho data integration tools and components

Figure 2 Pentaho data integration tools and components⁵

³ <http://www.pentaho.com/>

⁴ <http://en.wikipedia.org/wiki/Pentaho>

⁵ figure taken from: "Pentaho Solutions: Business Intelligence and Data Warehousing with Pentaho and MySQL", published by Wiley Publishing, Inc., copyright 2009 Wiley Publishing, Inc., Indianapolis, Indiana

The next figure depicts a screenshot of the Pentaho user interface where the steps, hops and record streams for the transformation are designed.

The data of the OpenUp! Data providers is stored in the ABCDv2.06 format. The main target repository of the OpenUp! Project is the European Digital Library, called Europeana. Europeana uses the Europeana Semantic Elements (ESE) as a metadata standard. Therefore the data is transformed according to the requirements of the harvesting routines of Europeana.

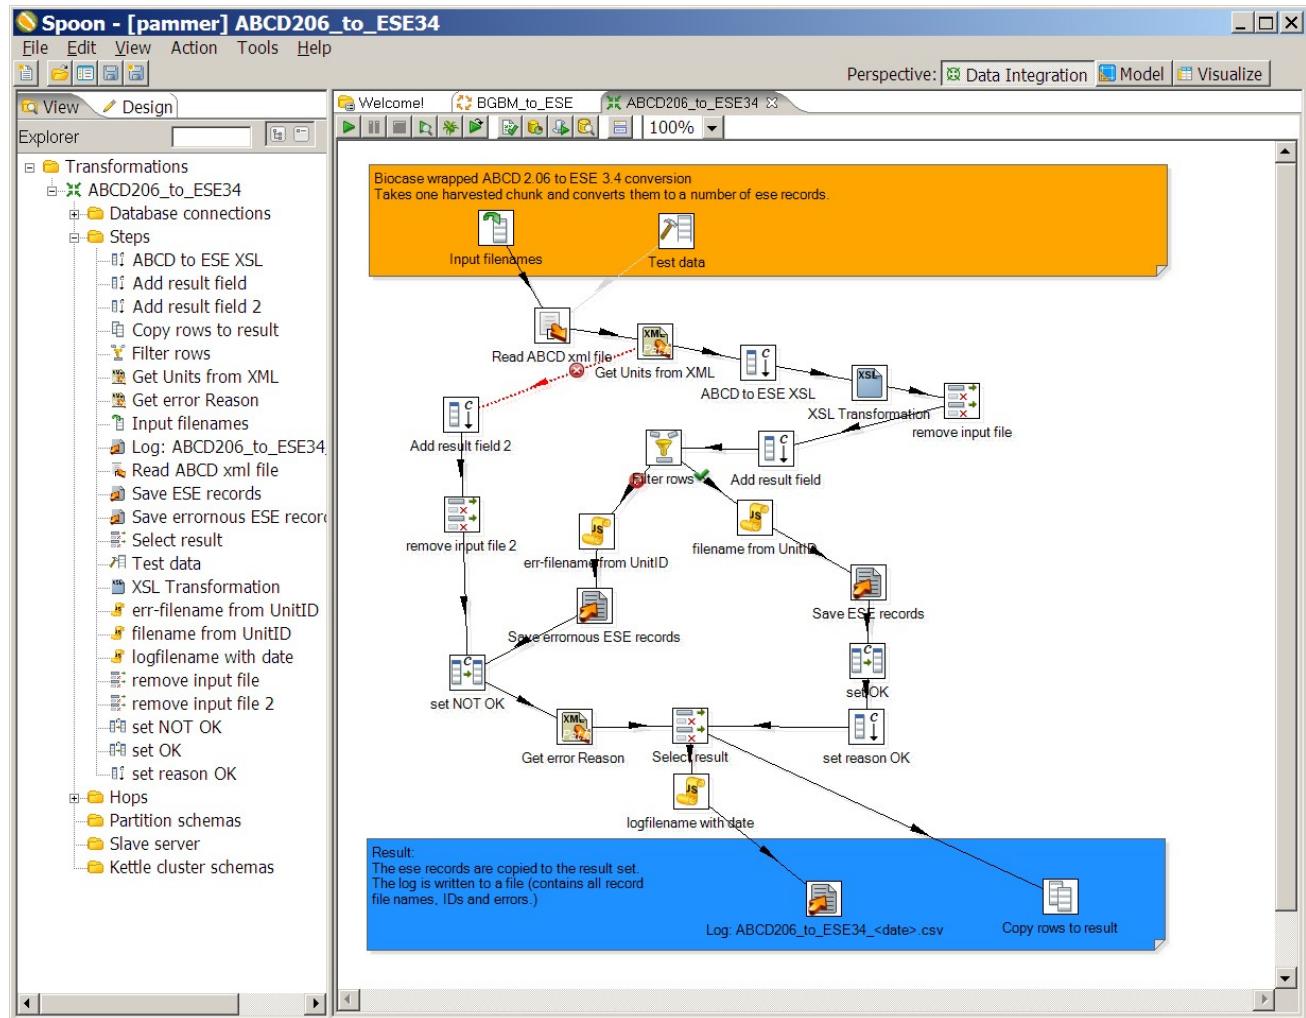

Figure 3 ABCD to ESE Pentaho transformation diagram

1.4. Access to Biological Collection Data (ABCD)

The data of the OpenUp! Content providers is primarily documented using the ABCD data schema. The Access to Biological Collections Data (ABCD)⁶ Schema is an evolving comprehensive standard for the access to and exchange of data about specimens and observations (a.k.a. primary biodiversity data).

The ABCD Schema⁷ attempts to be comprehensive and highly structured, supporting data from a wide variety of databases. It is compatible with several existing data standards. Parallel structures exist so that either (or both) atomized data and free-text can be accommodated. Version 2.06 is currently in use with the GBIF (Global Biodiversity Information Facility⁸) and BioCASE (Biological Collection Access Service for Europe⁹) networks.

1.5. Ingesting data into Europeana

The objectives of Europeana, the European Digital Library are:

- providing access to Europe's cultural and scientific heritage by way of a cross-domain portal
- facilitating formal agreement across museums, archives, audiovisual archives and libraries on how to co-operate in the delivery and sustainability of a joint portal
- stimulating and facilitating initiatives to bring together existing digital content
- supporting and facilitating digitization of Europe's cultural and scientific heritage¹⁰

The aim of providing a single entry point to the diverse cultural and scientific data bases and content repositories spread over Europe led to the need to develop a quite simple and straight forward data scheme at the beginning of Europeana (late 2008 onwards). This scheme is the Europeana Semantic Elements scheme (ESE) which builds on the international Dublin Core Qualified Standard. In agreement with Europeana office the first data transfer from OpenUp! to the Europeana portal in February 2012 will make use of this ESE format.

In October 2011 the first official guidelines for mapping data to the EDM, the Europeana Data model¹¹ have been published. EDM is a more advanced data model allowing for a semantic approach and the integration of rich information while supporting a better linkage between the different information units. In addition to its own elements EDM reuses elements from existing namespaces like the Resource Description

⁶ <http://wiki.tdwg.org/twiki/bin/view/ABCD/AbcdPrimer>

⁹ <http://www.biocase.org/>

¹⁰ <http://version1.europeana.eu/web/europeana-project/home>

¹¹ <http://version1.europeana.eu/web/europeana-project/technicaldocuments/>

Framework (RDF) and the RDF Schema (RDFS) namespaces (<http://www.w3.org/TR/rdf-concepts/>), the OAI Object Reuse and Exchange (ORE) namespace (<http://www.openarchives.org/ore>), the Simple Knowledge Organization System (SKOS) namespace (<http://www.w3.org/TR/skos-reference/>) and the Dublin Core namespaces for elements (<http://purl.org/dc/elements/1.1/>, abbreviated as DC), terms (<http://purl.org/dc/terms/>, abbreviated as DCTERMS) and types (<http://purl.org/dc/dcmitype/>, abbreviated as DCMITYPE).

It is planned that this more comprehensive data scheme will be evaluated and used for data transfers after February 2012.

1.5.1 The Europeana Semantic Elements v3.4

The ESE v3.4 Schema¹² is the currently used data scheme for data integration into the Europeana portal (www.europeana.eu). Version 3.4 of this metadata scheme introduced a number of mandatory elements that must be considered as well in the transformation process from ABCD to ESE.

ESE v3.4 comprises the following data elements:

Source	Element	Element Refinement(s)
DC	title	alternative
DC	creator

2. Mapping ABCD v2.06 to ESE v3.4¹⁴

The following table depicts the first version of the mapping of the ABCD data fields to the ESE data scheme. It is still very comprehensive taking into account that the content providing partners have used the ABCD elements very differently (meaning that some partners have used lots of fields while others might have used only a few etc..., depending as well on the data they have been describing).

ESE	ABCD 2.06	Comment	Obligation
1	dc:title	/DataSets/DataSet/Units/Unit/Identifications/Identification/Result/TaxonIdentified/ScientificName/FullScientificNameString	take the value with: PreferredFlag
	dc:title	/DataSets/DataSet/Units/Unit/SpecimenUnit/NomenclaturalTypeDesignations/NomenclaturalTypeDesignation/TypifiedName/FullScientificNameString	
2	dc:description	/DataSets/DataSet/Units/Unit/Notes	Mandatory to provide one of these two (dc:title or dc:description)
	dc:description	/DataSets/DataSet/Units/Unit/SpecimenUnit/Preparations/Preparation/PreparationType	
	dc:description	/DataSets/DataSet/Units/Unit/Sex

Glossar

ABCD	Access to Biological Collection Data An evolving comprehensive standard for the access to and exchange of data about specimens and observations. http://wiki.tdwg.org/twiki/bin/view/ABCD/AbcdPrimer
BioCASE	Biological Collection Access Service for Europe A transnational network of biological collections of all kinds. http://www.biocase.org/
DC	Dublin Core A vocabulary of fifteen properties for use in resource description. http://www.dublincore.org/documents/
ESE v3.4	The Europeana Semantic Elements specification of the Europeana Portal (www.europeana.eu) http://www.europeana.eu/schemas/ese/ESE-V3.4.xsd
GBIF	Global Biodiversity Information Facility aim: encourage free and open access to biodiversity data, via the Internet. http://www.gbif.org/
HIT	Harvesting Index Toolkit An open source Java-based web application developed by the GBIF Secretariat to manage biodiversity data harvesting and quickly build indexes of harvested data. http://code.google.com/p/gbif-indexingtoolkit/
ORE	OAI Object Reuse and Exchange namespace http://www.openarchives.org/ore
RDF/RDFS	Resource Description Framework and the RDF Schema http://www.w3.org/TR/rdf-concepts/ ,
SKOS	Simple Knowledge Organization System namespace http://www.w3.org/TR/skos-reference/
